PROJECTS

Art Movement Classification Using AI

- Collected a dataset of 30,000 curated images from five art movements using Selenium for automated data collection. Applied pHash for deduplication and data augmentation for diversity. Trained and evaluated visual models (DeViT, LeViT, DINO, CAIT, MobileViT) using accuracy, confusion matrix, ROC, and AUC metrics.

Amsterdam Weather Forecast Calculation

- Analyzed historical weather data for Amsterdam by downloading CSV files containing weather information. Processed and calculated weather trends using Python and Pandas, focusing on parameters like temperature, humidity, and other weather indicators.

Bakery Website Design

- Designed and developed a modern, responsive website for a bakery using HTML, CSS, and JavaScript.

Tender Website Development

- Developed an online auction platform using PHP, JavaScript, HTML, and CSS. Implemented features for bidding, auction management, and user registration.

SKILLS

Programming Skills: Python, C#, JavaScript, HTML, CSS, PHP, SQL

Languages: Turkish(Native), English(Upper-Intermediate)
